Challenge: *Let's Make Split Better*

Build a product that measurably improves daily life in Split – for the people who live here, the people who work here, and the people who pass through. The parent dropping kids off at school, the konoba owner trying to make rent, the pensioner navigating bureaucracy, the student commuting from Žnjan, the nurse working night shifts at KBC, the founder coding from a Bačvice co-working spot, the family arriving for their first time at the airport – they all count.

You have 9 hours. Pick a real problem, ship something real.

Problem spaces (pick one, or invent your own)

- **Mobility & public space** - Buses are unpredictable. The Riva turns into a wall of people every July. Bike lanes exist in theory.
- **Tourism vs. residents** - Short-term rentals are reshaping neighborhoods. Locals are pushed out of the center. Beaches and parks have no signal for when they're worth visiting.
- **Public services & bureaucracy** - Getting a document, registering a business, dealing with the porezna – every interaction with the state is a treasure hunt. Information exists but is unsearchable, in PDFs, or in someone's head.
- **Health & aging Long waits at Firule** - An aging population that doesn't speak the language of digital tools. Mental health resources that are hard to find even when you know to look.
- **Environment & coast** - Sea quality, air quality, waste, microplastics, the state of Marjan. Lots of data, almost none of it actionable for a regular person.
- **Community & local economy** - Small businesses competing with chains. Neighborhood events nobody hears about. Diaspora that wants to stay connected but has no good channel.
- **Safety & emergencies** - Wildfire season. Bura. Flash floods on Trumbićeva obala. Tourists who don't know what the sirens mean.

Judging criteria

The jury - made up of sponsor representatives - selects **7 finalist teams** after the build segment. Finalists get **5 minutes to present + 3 minutes for Q&A**. Per the official SheepAI rules, the jury scores submissions on two axes:

- **Execution - 80%.** What you actually built. Does it work, would a citizen actually use this on Monday morning, is there a credible path from hackathon to v1?
- **Presentation - 20%.** How you tell the story. Clarity, demo flow, why it matters for Split.
